Subject: Irradiation of "fresh" fruit and vegetables

Categories: [REDACTED]

To "food standards" and parliamentary boffins,

It has come to my attention that there is a push to irradiate fruit and vegetables in this country. It is such an irrational undertaking it leaves me confused and angry.

We have on our "plate " at this very moment in history a climate emergency, a pandemic, drought, more potential bushfire catastrophies, the annihilation of our Great Barrier Reef and so many other distressing events that this push by "food standards Inc" is basically the icing on a an extremely unpalatable cake.

Why is now the time to destroy the nutrients in our fresh food by irradiation? Food grown in our heretofore lucky country.

I oppose the push /plan by whatever /whoever and I would like to know why it is suddenly such an issue. If it is serious issue it should to go to a referendum, even if it is covid related because we have the right to choose what we feed our families.

Yours sincerely human rights boffin
